

ultra

small

thermo  
logger

DST micro-T is the smallest implantable temperature recorder on the market. It measures temperature with a high accuracy and stores the data in its internal memory. All measurements are real time related.

DST micro-T is a unique data logger that is being used in the pharmaceutical industry. This thermo logger is a **great asset to researchers in drug safety and stability studies** because of its extremely small size, high accuracy and biocompatibility.

For over 15 years Star-Oddi has developed small data loggers for various industries and research applications.
